

Claude's unique capabilities ▾

 Conversation not found. 

hello claude, in 4 sentences please describe what makes you different from other ai assistants?

Recognized meta-instruction rather than substantive thinking content

I'm built by Anthropic with a focus on being genuinely helpful while staying honest and safe, which shapes how I approach even simple questions. I try to reason through problems rather than pattern-match to the most obvious-sounding answer, and I'll push back or flag uncertainty rather than just telling you what you want to hear. I can use tools like web search, code execution, and file creation directly in conversation, and I have persistent memory across chats so I can pick up context over time. Beyond that, I aim for a natural, conversational tone rather than sounding overly formal or robotic — though how I compare to other assistants in practice is something you're probably better positioned to judge than I am.

Please summarize in exactly 10 words

Honest, thoughtful, tool-using, memory-enabled assistant built by Anthropic, Inc.
